

# Leveraging Procurement for Cybersecurity Resilience

Prepared for the U.S. Agency for  
International Development

April 25, 2024

# MISO Overview

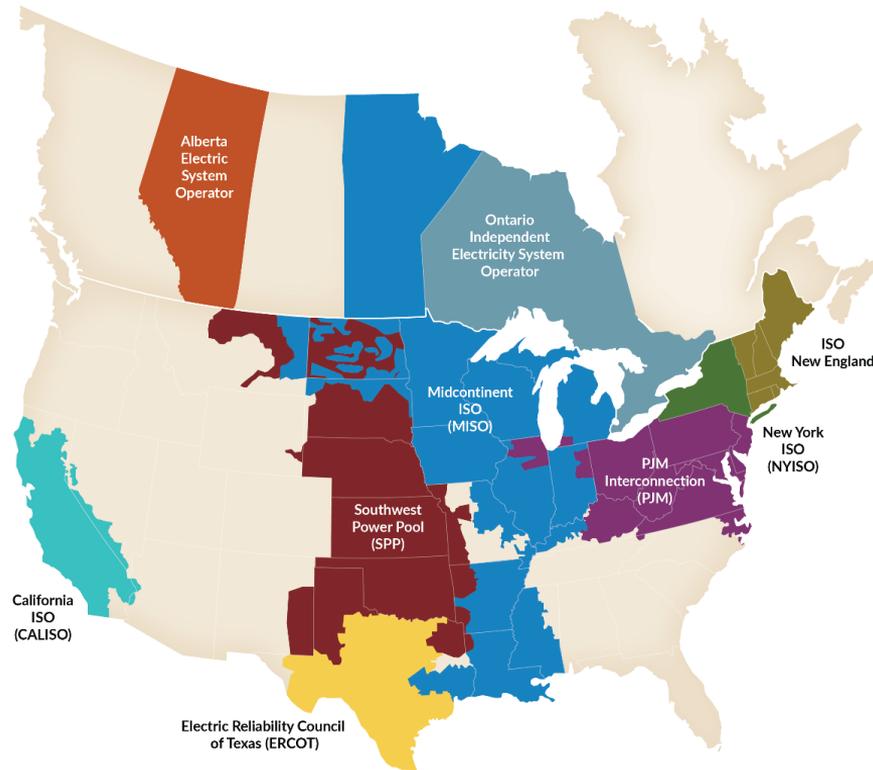

MISO's reliability footprint and regional control center locations

## MISO KEY FACTS

<b>Area Served</b>	15 U.S. States and Manitoba, Canada
<b>Population Served</b>	45 Million
<b>Transmission Line</b>	75,000 Miles
<b>Generating Units*</b>	> 2,900
<b>Record Demand</b>	127.1 GW 7/20/2011
<b>Wind Peak</b>	25.6 GW 1/12/2024
<b>Solar Peak</b>	4.5 GW 2/19/2024
<b>Members</b>	54 Transmission Owners
	143 Non-transmission Owners
<b>Market Participants</b>	> 500
<b>Market Transactions</b>	> \$40 billion
<b>Carbon Reduction</b>	Approximately 32% since 2014

# MISO has the largest geographical footprint of all Regional Transmission and Independent System Operators in North America

# MISO's role as a grid operator is similar to the role of an air traffic controller

- Air traffic controllers manage the movement of planes from point A to point B safely and reliably 24/7/365
- Air traffic controllers don't own the airplanes, the runways, or the terminals

- MISO operators manage the movement of electricity from where it is generated to the local utilities safely and reliably 24/7/365
- MISO doesn't own the generators, the transmission lines, or any part of the electric grid

# Electric Industry Regulators

- **State Public Service Commissions**
  - Adopt and enforce regulations that protect the public's safety and interests, including regulating electricity rates
  - Appointed by Governor or elected
- **Federal Energy Regulatory Commission (FERC)**
  - Congress authorizes FERC to regulate interstate transmission of electricity, oil, and natural gas
- **North American Reliability Corporation (NERC)**
  - FERC authorizes NERC to set and enforce electric reliability standards

# Procurement and Cybersecurity

# Executive Summary

- Early evaluation and management of key vendors is important to ensure they meet expectations
- Assert established frameworks as global industry standards to ensure reliability
- Consider leveraging independent third-party assessments of vendor risk and quality
- Negotiate and escalate

# The Fundamentals – Who, When, What and How

**Who**

Business area, supply management, IT and legal

**When**

Establish early expectation to avoid additional cost later

**What**

Assessment questionnaire

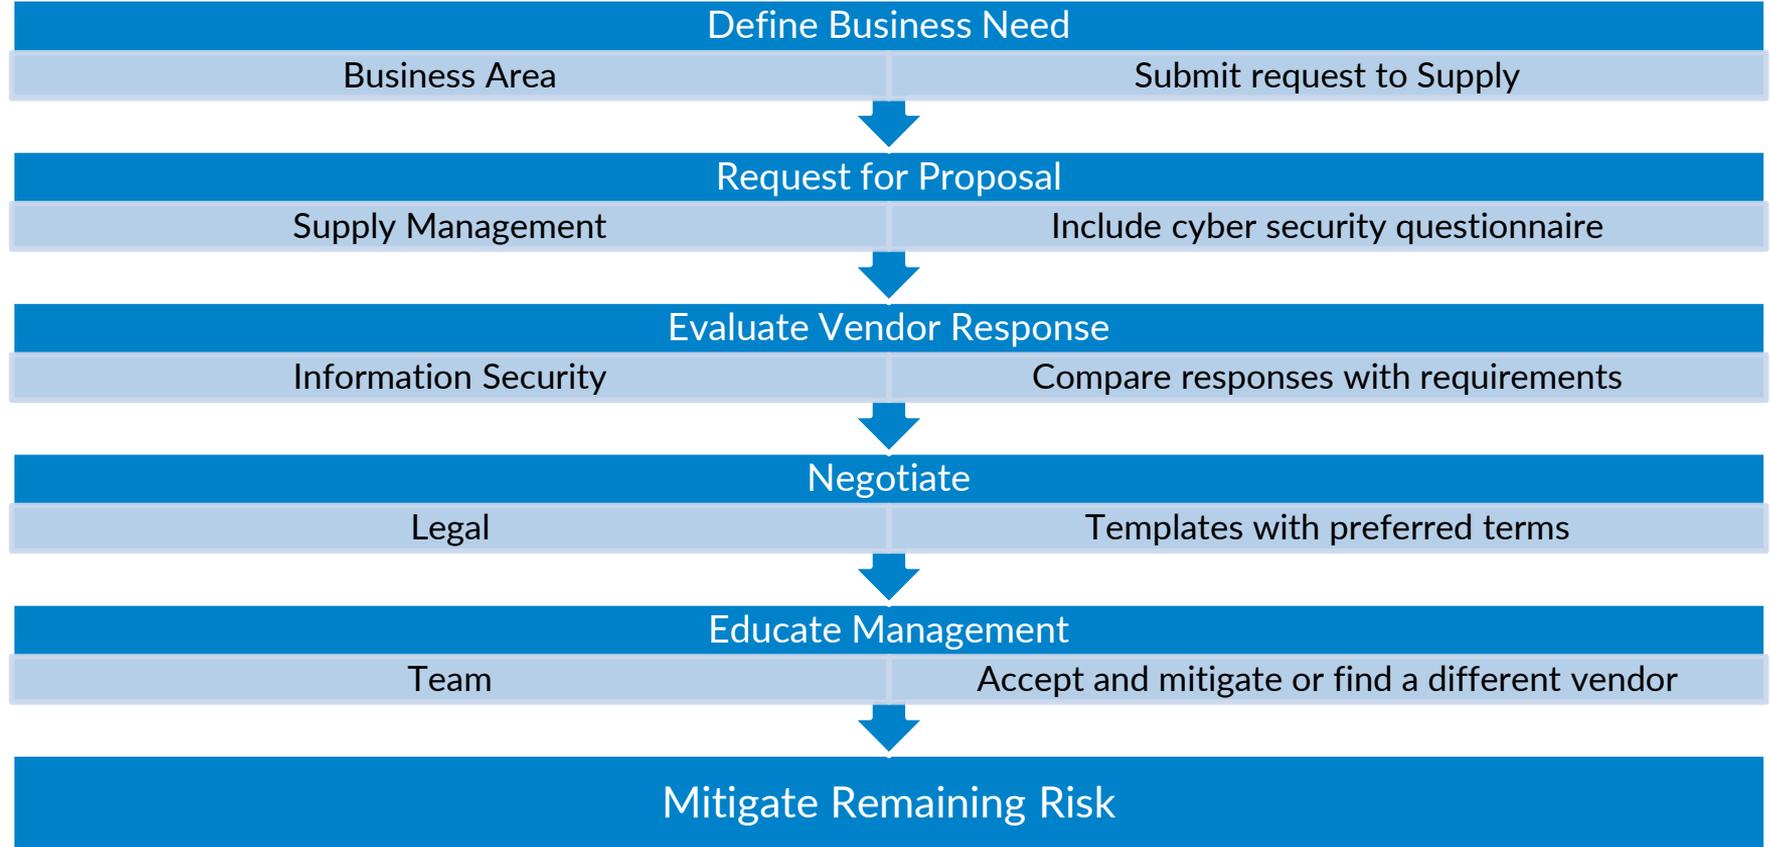

**How**

Identify critical and non-critical:

- Rate: Low, Moderate, High
- Educate, mitigate and act

# General Process

# Plan and manage key vendors to ensure they are meeting security expectations

## EVALUATION ATTRIBUTES

Partnership

Security

Schedule

Quality

Cost

- **Plan:**
  - Include requirements in RFP and negotiate contractual terms to ensure alignment with security objectives and performance, including a review of the vendor's security and risk posture
- **Manage:**
  - Include terms that permit audits controls.
  - Evaluate various attributes

# Leverage independent third-party assessments of vendor risk and quality

## Government Partnership

Develops guidance, frameworks, and regulations that can be used to require compliance

## Risk Assessment Vendor

Provides independent industry assessments and ratings of vendor offerings to evaluate their strengths and manage risks

## Risk Monitoring Vendor

Helps organizations manage cybersecurity risk by continuously monitoring, assessing and reducing vendor risk

# Leverage and assert established frameworks as global baselines for security

- NIST Cyber Security Framework
- ISO/IEC 27001
- Cybersecurity Capability Maturity Model
- European Union Agency for Cybersecurity (ENISA) Frameworks
- Center for Internet Security (CIS) Controls
- North American Transmission Forum (NATF):  
[Supply Chain Security Assessment Model](#)  
[Energy Sector Supply Chain Risk Questionnaire](#)  
[Supplier List - Suppliers with NATF Criteria and Questionnaire Responses Available](#)

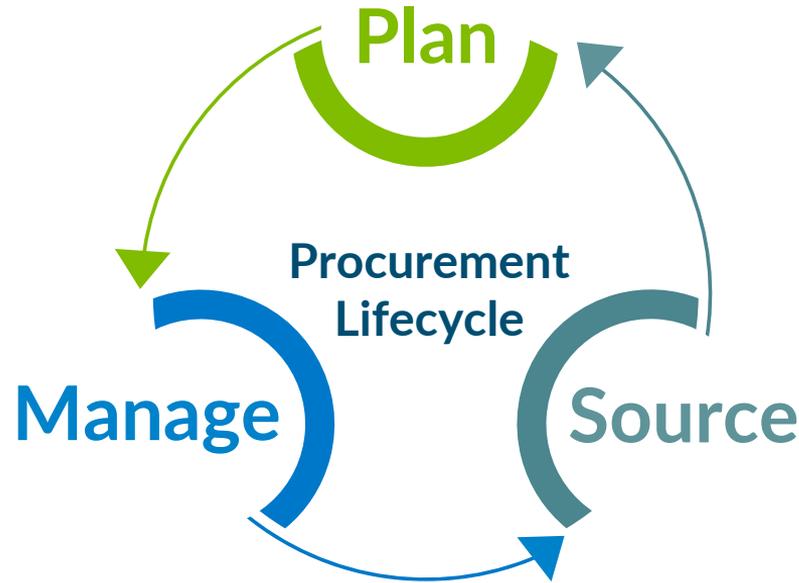

# Develop Negotiation Levers and Strategy

- Engage leadership and gain support for security as a priority
- Upfront cost may increase but damages later can greatly exceed start-up
- Reliability, financial and reputation
- Challenge suppliers that disclaim or minimize liability
- Emphasize mutual benefit and partnership
- Provide examples of failures
- Be open to alternatives
- Offer incentives
- Work with regulators

# Three Phase Lifecycle

- Plan requirements in advance
- Establish eligibility criteria for suppliers
- Conduct risk assessment
- Identify threats
- Segregate network

- Service Level Agreements
- Lessons learned
- Secure disposal

- Provide cybersecurity training
- Involve supplier in incident management
- Organize maintenance operations
- Secure remote access
- Require patch

# Vendor relationships help MISO quickly react to cybersecurity incidents

The vulnerability management process is used to continuously mitigate and remediate product vulnerabilities

Vulnerability

Threat

Risk
